CLAIMS:

1. A card attachment/detachment device holding detachably a card in a space defined between a body and a lid, comprising:
  - a card accommodation section arranged at any one of the body and the lid;
  - a terminal arranged at the other to come into contact with a card placed in the card accommodation section and to press the card toward the card accommodation section;
  - a stopper section constituting a part of a card insertion/removal opening communicating with the card accommodation section and coming into contact with a part of the card placed in the card accommodation section; and
  - a first biasing means pressing the card toward the stopper section when the card is placed in the card accommodation section and ejecting the card to the outside through the card insertion/removal opening when the card is removed from the card accommodation section.
2. A card attachment/detachment device according to Claim 1, further comprising a cap arranged detachably at the card insertion/removal opening.
3. A card attachment/detachment device according to Claim 1, further comprising an operating means arranged to release pressure of the first biasing means applied to the card against the stopper section.
4. A card attachment/detachment device according to Claim 1, further comprising a rib arranged at a part of the card accommodation section, the rib coming into contact with a distinctive shaped section of the card when the card is placed in the card accommodation section.
5. A card attachment/detachment device holding detachably a card in a space defined between a body and a lid, comprising:
  - a card accommodation section arranged at any one of the body and the lid;
  - a stopper section constituting a part of a card insertion/removal opening, which communicates with the card accommodation section displaced from the card insertion/removal opening in a width direction of the card, and coming into contact with a part of the card placed in the card accommodation section;
  - an engagement means engaging with the card within the card

accommodation section; and  
an operating means moving the card to place a part of the engaged card in contact with the stopper section.

6. A card attachment/detachment device according to Claim 5, further comprising a second biasing means pressing the engagement means in a direction of crossing a direction of insertion of the card.

7. A card attachment/detachment device according to Claim 5, further comprising a third biasing means ejecting the engagement means to the outside through the card insertion/removal opening.

8. A card attachment/detachment device according to Claim 5, further comprising a rib arranged at the engagement means, the rib coming into contact with a distinctive shaped section of the card when the card is placed in the card accommodation section.

9. A card attachment/detachment device according to Claim 5, further comprising a rib arranged at the card accommodation section, the rib coming into contact with a distinctive shaped section of the card when the card is placed in the card accommodation section.

10. A card attachment/detachment device holding detachably a card in a space defined between a body and a lid, comprising:  
a holder allowing being inserted into and removed from the space and having a card accommodation section accommodating the card;  
a lock means holding the holder within the space;  
a release means releasing the lock of the lock means; and  
a biasing means ejecting the engagement means to the outside when the card is removed from the card accommodation section.

11. A card attachment/detachment device according to Claim 10, further comprising a rib arranged at a part of the card accommodation section, the rib coming into contact with a distinctive shaped section of the card when the card is placed in the card accommodation section.
